Update: Information About and Prevention of the Coronavirus Disease 2019 (COVID-19)

On February 25, 2020, the Center for Disease Control (CDC) issued an update stating that, despite the Coronavirus being detected within the United States, the virus is not spreading throughout the country. The CDC is reporting the risk to the American public remains low. According to the CDC and local public health departments, there are no cases which have been confirmed in Maryland or the National Capital Region.

Notwithstanding, the M-NCPPC continues to work closely with local/state public health agencies and the agency's medical provider to ensure that appropriate and coordinated protocols are in place. This document addresses frequently asked questions on the Coronavirus and provides links to helpful resources. Information follows the most current guidance from the CDC, which is the federal agency responsible for setting national guidelines for response to new and emerging health concerns. The M-NCPPC will continue to monitor infection control protocols and will implement public health recommendations as required. We will also continue to update our workforce with relevant information.

The M-NCPPC's Safety Office is the Point of Contact for Workplace Concerns. Questions/concerns regarding the handling of COVID-19 within M-NCPPC should be directed to the Safety Office, which will coordinate necessary follow-up with state/local health departments. Each situation will be reviewed against established CDC infection control standards to prevent potential transmission. The Safety Office is available 24 hours/7 days a week through the following numbers: **(301) 395-0563; (301) 275-5126; or (240) 393-0419.**

What Is the Coronavirus and How Is It Spread?

According to the CDC, the new Coronavirus causes respiratory illness in people and spreads in ways similar to the common cold or flu. This virus was first identified during an investigation into an outbreak in Wuhan, China. The CDC maintains a list of countries that are affected with confirmed cases. Although there are isolated cases in the United States, the CDC reports that this virus currently is not spreading in communities within the United States.

Risk of infection is dependent on exposure. Close contact with people who are infected increases the risk of exposure. Patients with COVID-19 Coronavirus have reportedly had mild to severe respiratory illness with symptoms of fever, cough and shortness of breath. In more severe cases, patients can have complications from pneumonia.

What is Being Done to Prevent the Spread of Coronavirus

The CDC is working with public health agencies to assess readiness and implement mitigation measures. The M-NCPPC remains in regular contact with local health agencies to put in place all recommended protocols.

What Can I Do as an Employee?

This time of year, individuals are prone to a number of respiratory illnesses. The best way to prevent infection is to avoid being exposed to a virus. The same everyday precautions apply when dealing with any contagious, respiratory illness—including the COVID-19 Coronavirus. Being prepared and taking preventive measures are essential to staying protected. The CDC recommends steps that are outlined on the next page.

What Can I Do as an Employee? (continued)

Stay home when you are sick. The CDC recommends individuals who have symptoms of acute respiratory illness stay home and not come to work until they are free of fever, without the use of fever-reducing or other symptom-altering medicines (e.g. cough suppressants) for at least 24 hours.

- Employees should notify their supervisor when they are sick. Supervisors should encourage employees to stay home when they are sick or exhibiting symptoms of a respiratory illness.
- It's important to rest and to prevent exposure to other individuals. You should restrict activities outside your home, except for getting medical care. Do not go to work, school, or public areas to avoid getting others sick. Avoid using public transportation, ridesharing, or taxis.
- If you have travelled to an area with confirmed cases of Coronavirus, come in contact with someone who has traveled to that area, or might have been exposed to the Coronavirus, you must inform your healthcare provider. **If your healthcare provider determines a risk**, please have the provider contact the M-NCPPC Safety Office at **(301) 395-0563; (301) 275-5126; or (240) 393-0419**.

Protect yourself by practicing careful hygiene

- **Avoid close contact** with people who are sick. Avoid sharing personal household items such as dishes, drinking glasses, cups, eating utensils, towels, or bedding.
- **Wash your hands often** with soap and water for at least 20 seconds especially before eating, and after blowing your nose, coughing, or sneezing. If soap and water are not readily available, use an alcohol-based hand sanitizer with at least 60% alcohol.
- **Avoid touching your eyes, nose, and mouth with unwashed hands.**
- **Cover your cough or sneeze** with a tissue, then throw the tissue in the trash.
- **Clean and disinfect** any frequently touched objects and surfaces using a regular household cleaning spray or disinfectant wipe.

Extra Precautions Against the COVID-19 (Coronavirus)—Travel

The CDC recommends that travelers avoid all nonessential travel to areas experiencing confirmed cases of Coronavirus. If travel cannot be avoided, the following link provides current recommendations from the CDC on travel and protection in regions affected by the Coronavirus:
